

DATA ANALYST / DATA OPS INTERN

TRAN THIEN PHUC

Ho Chi Minh City, Vietnam | +84 348 497 984 | tthienphuc1612@gmail.com | github.com/iamzaneth

SUMMARY

Data Engineering student with hands-on experience in SQL, database systems, data processing, and data pipeline development. Experienced in Python, PostgreSQL, MySQL, Docker, Docker Compose, and practical data validation workflows. Seeking a Data Analyst / Data Ops internship to support data extraction, data cleaning, SQL-based analysis, data quality checking, ETL operations, and technical documentation for real-world systems.

EDUCATION

Ho Chi Minh City University of Technology and Engineering (HCMUTE)

Bachelor of Data Engineering

Sep 2023 – Present

Ho Chi Minh City, Vietnam

TECHNICAL SKILLS

Languages: SQL, Python, Java, JavaScript/TypeScript.

Database: PostgreSQL, MySQL, QuestDB, Tables, Views, Joins, Primary Keys, Foreign Keys, Indexes.

Data Operations: Data Cleaning, Data Validation, Data Quality Checks, Data Reconciliation, Data Mapping, Data Flow.

Data Engineering: ETL Pipelines, Data Ingestion, Stream Processing, Kafka, Time-series Data.

Backend & Services: REST APIs, NestJS, Swagger, Socket.IO, Service Configuration.

Tools: Git, Docker, Docker Compose, WSL/Linux, Jupyter Notebook, Google Colab, Excel.

PROJECTS

NexTick - Real-time Cryptocurrency Data Platform | *Python, Kafka, QuestDB, NestJS, Docker*

2026

- Built an end-to-end data platform that collects real-time cryptocurrency trade data from Binance, processes raw market events, stores historical records, and provides data for chart visualization.
- Designed and documented a clear data flow from data collection, message streaming, data processing, database storage, backend APIs, and frontend display.
- Processed raw trade data into OHLCV candlestick records, including open price, high price, low price, close price, and trading volume for each time interval.
- Used **Kafka** to transfer real-time data between services and used **QuestDB** to store and query historical time-series data.
- Developed **NestJS** REST APIs to query historical data, validate request parameters, document API behavior with Swagger, and deliver real-time updates through **Socket.IO**.
- Applied basic data validation and consistency checks to make sure processed candle data could be used reliably by downstream services.
- Used **Docker Compose** to configure and run multiple local services, including Kafka, Kafka UI, QuestDB, backend, and frontend components.
- Built a **React + TypeScript** charting interface to load historical data from APIs and update charts automatically when new market data arrives.
